# INTRODUCTION

**Story:** In the world about 80% people, who like to play games, like puzzle games. All of ages people want to develop their brain efficiency. Searching important things in a time are very important. To develop searching skill and kids brain efficiency, we want to build this project. If people improve their brain by playing puzzle game, they can support their life completely.

## System Requirements:

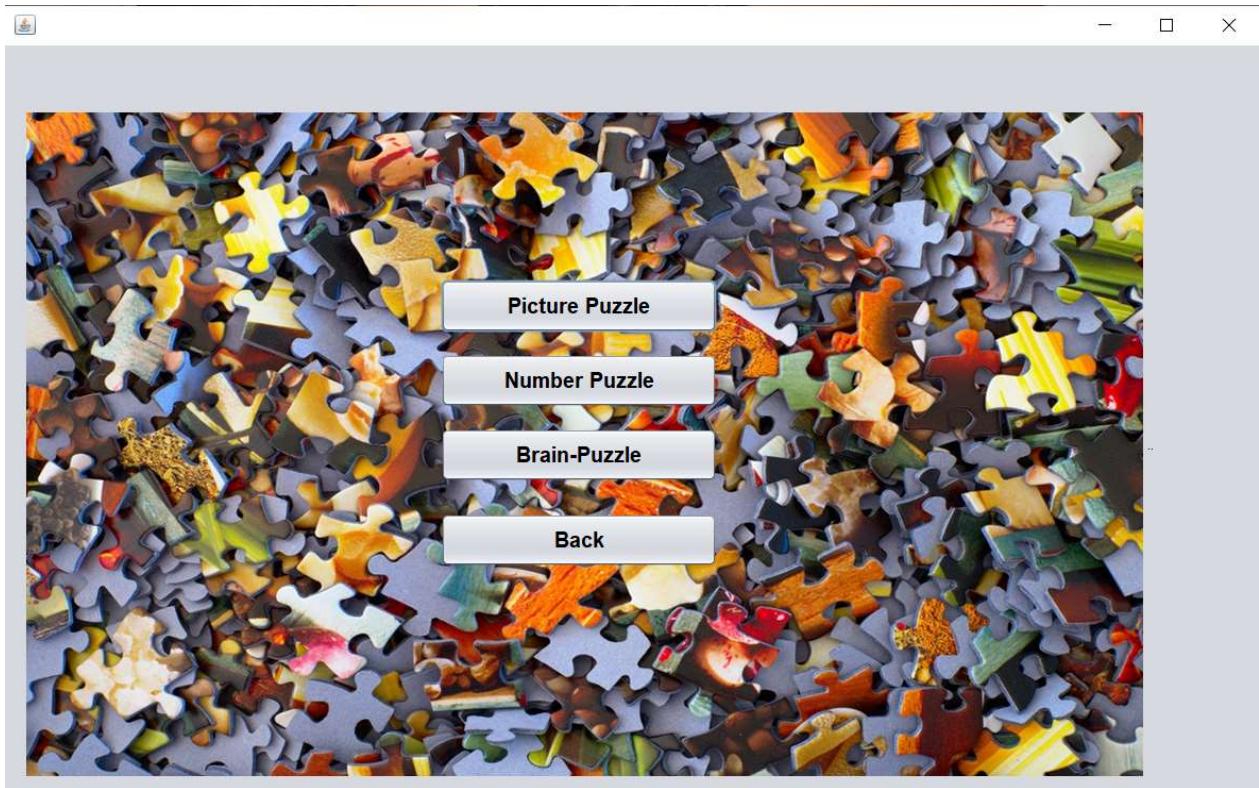

- Operating System: Any type of OS (Recommended Windows OS)
- Supported circumferential devices: PC, Mouse.

# GAME INTERFACE

**Main Menu:** We have three option in Main Menu.

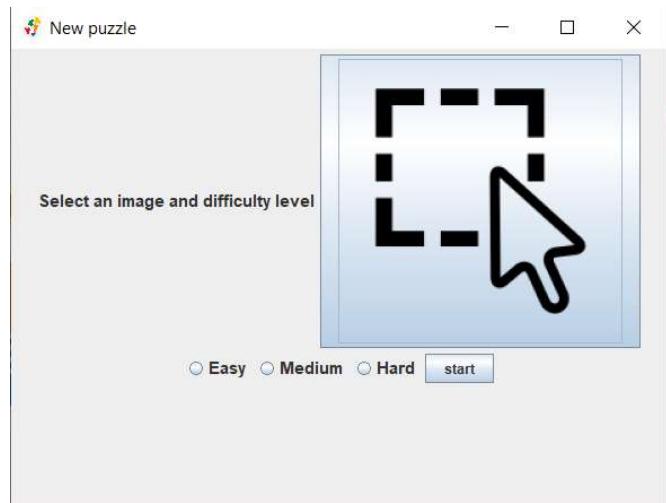

1. **Choose Game:** Here we can select game format.
2. **Setting:** Here we can change the game environment.
3. **Exit:** To exit from the game.

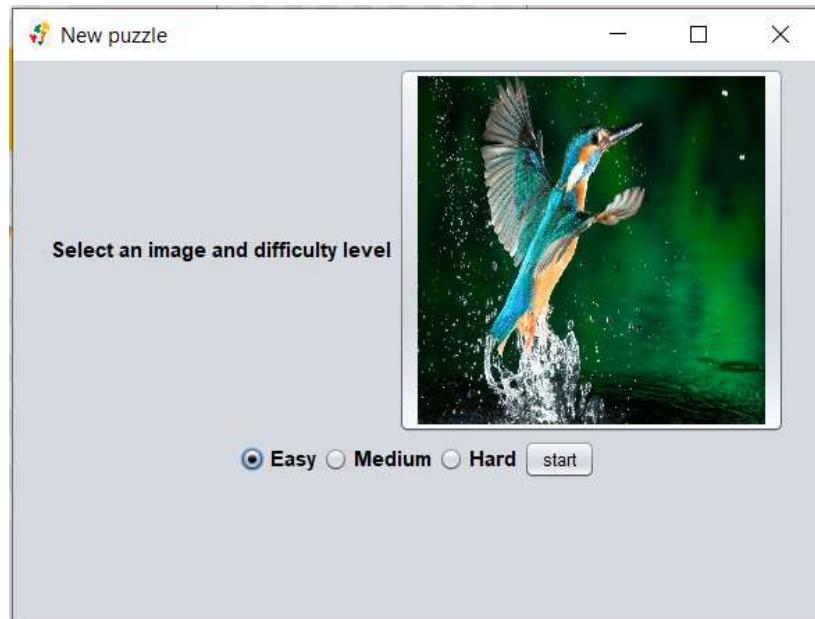

1. **Choose Game:** You can choose three types of game format. Like Picture Puzzle, Number Puzzle and Brain Puzzle.
  - a. **Picture Puzzle:** It's a game of slide puzzle. Player can choose image from his/her PC.

Player can choose image clicking on selector icon and can choose difficulty level.

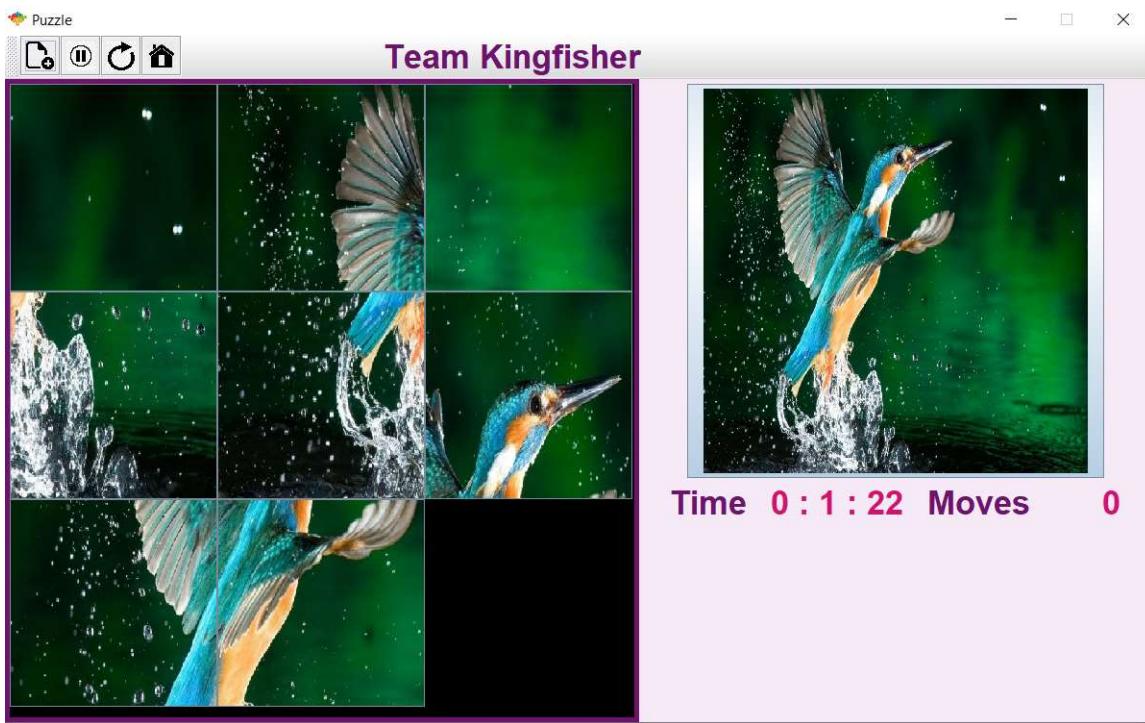

#### Difficulty Levels:

**Easy:** It has 9 puzzle pieces.

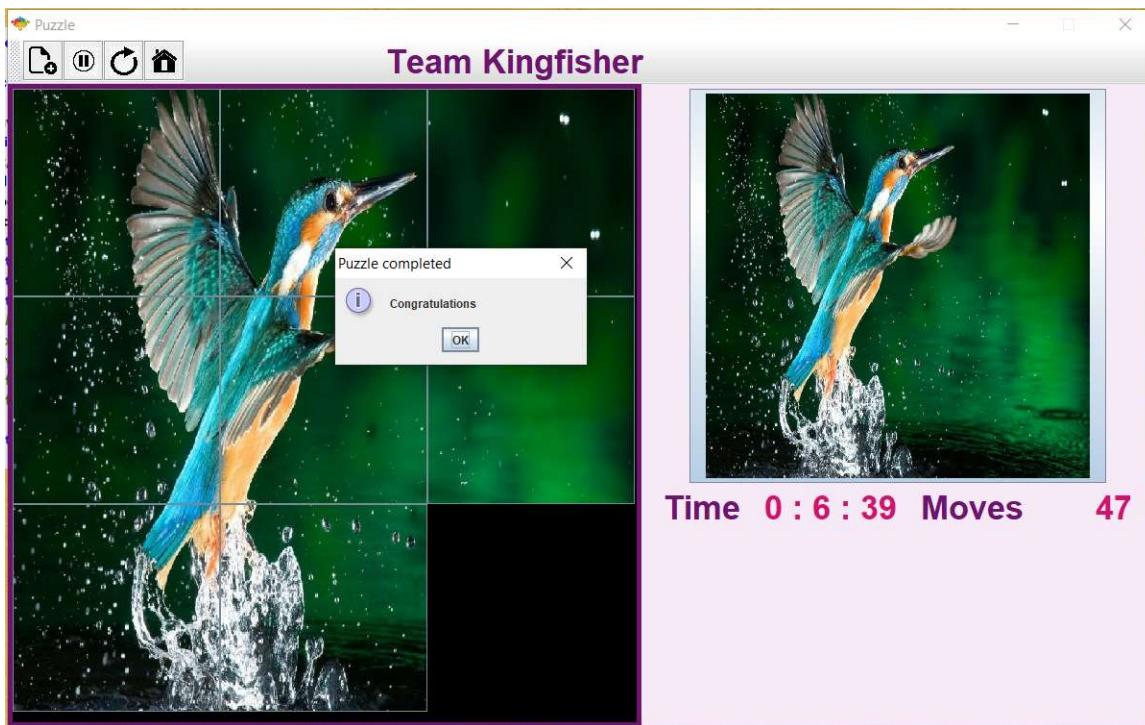

**Medium:** It has 16 puzzle pieces.

**Hard:** It has 25 puzzle pieces.

By clicking on the start button the game will be start and the time will be counted. Each clicking on the possible moving puzzle pieces will be counted.

After successfully matching the puzzle a congratulations message will be shown.

We can pause the game during playing time. So that time counting will be stopped.

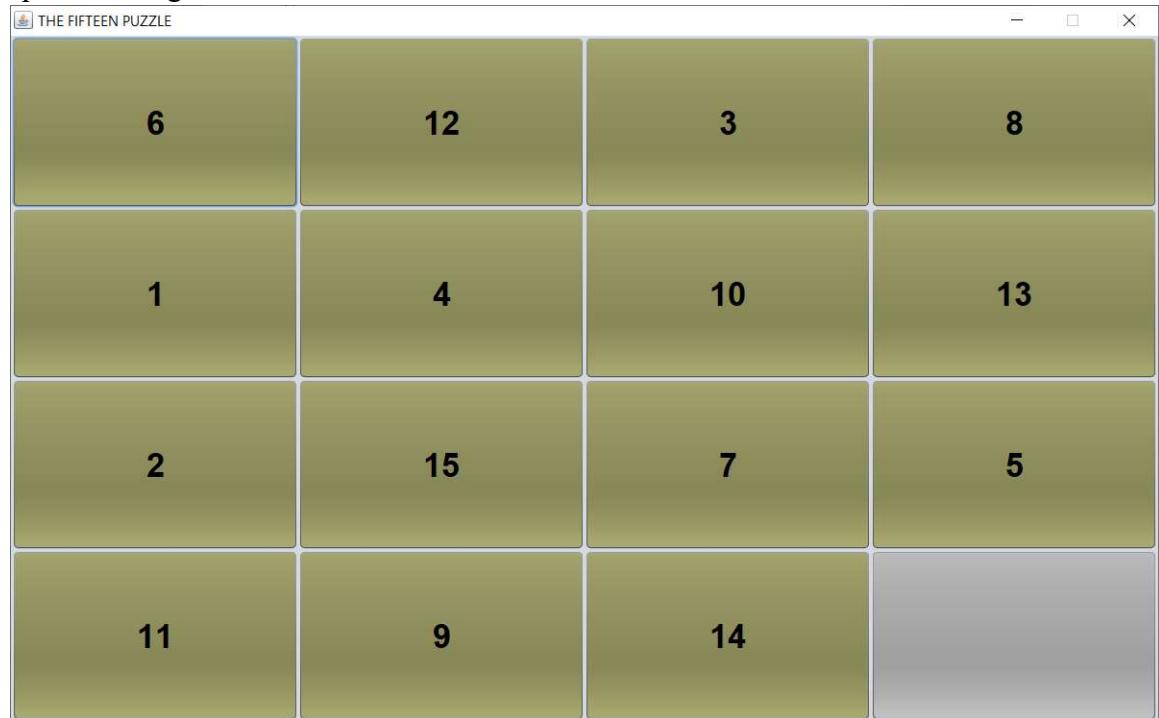

Then, clicking on the play button the game will be resumed.

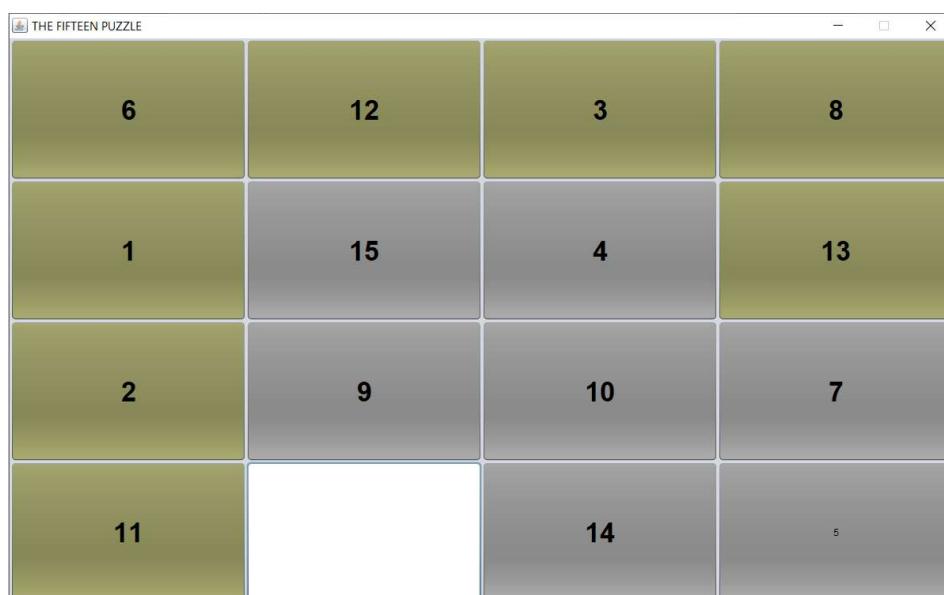

You can restart your game by clicking on the retrying button and the puzzle pieces will be shuffled.

By clicking on the home button, you will go to the Main Menu.

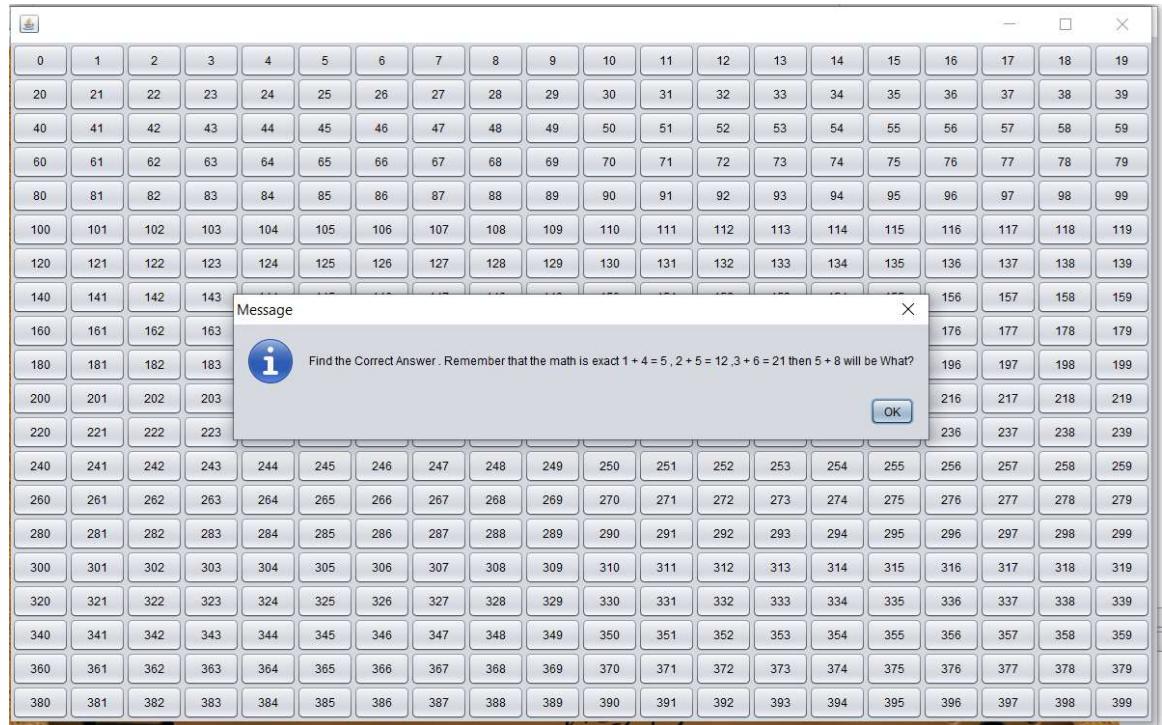

- b. **Number Puzzle:** It's called the fifteen puzzles. You can match this puzzle using numbers.

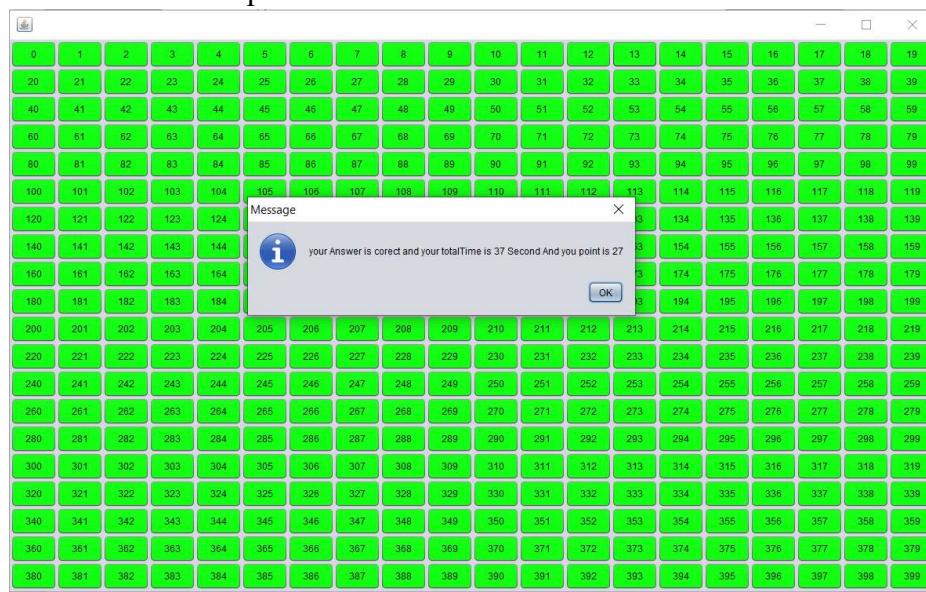

Player can see the changing of colors that is moved once.

- c. **Brain Puzzle:** There 400 typical buttons that indicate 0-399 numbers. Here, computer ask many questions to you. Generally, questions are mathematical typed question. Each of the question has only one answer and the answer are presented any one exact number button. The button number indicate the answer number.

If the player answered the question correctly then the player listens a “Yes” sound otherwise “No” and if the player answers correctly, the player scored a number to complete the game in minimum time. And then the player asked for another question.

# SUPPLEMENT

Music: Here have two music to create a loveable environment.

About: In the about menu, here you can see the game developers and designer.
